

KPIs CREATED IN POWER BI WITH FORMULAE (DAX)

#	KPI NAME	DESCRIPTION	DAX FORMULA
1	 Avg Age	Average age of customers	Avg Age = <code>AVERAGE('Sales_Dataset'[Age])</code>
2	 Avg Quantity Per Order	Average quantity of products per order	Avg Quantity Per Order = <code>DIVIDE(SUM('Sales_Dataset'[Quantity]),DISTINCTCOUNT('Sales_Dataset'[Order_ID]))</code>
3	 Avg Order Value	Average order value	Avg Order Value = <code>DIVIDE([Total Sales],[Total Orders])</code>
4	 Total Sales	Total sales amount	Total Sales = <code>SUM('Sales_Dataset'[Total Sales])</code>
5	 Total Orders	Total number of orders	Total Orders = <code>DISTINCTCOUNT('Sales_Dataset'[Order_ID])</code>
6	 Male Customers	Total number of male customers	Male Customers = <code>CALCULATE(DISTINCTCOUNT('Sales_Dataset'[Customer_ID]), 'Sales_Dataset'[Gender] = "Male")</code>
7	 Female Customers	Total number of female customers	Female Customers = <code>CALCULATE(DISTINCTCOUNT('Sales_Dataset'[Customer_ID]), 'Sales_Dataset'[Gender] = "Female")</code>
8	 Previous Month Customers	Customers in previous month	Previous Month Customers = <code>CALCULATE(DISTINCTCOUNT('Sales_Dataset'[Customer_ID]), DATEADD('Sales_Dataset'[Order_date], -1, MONTH))</code>
9	 Current Month Customers	Customers in current month	Current Month Customers = <code>DISTINCTCOUNT('Sales_Dataset'[Customer_ID])</code>
10	 Total Customers	Total unique customers	Total Customers = <code>DISTINCTCOUNT('Sales_Dataset'[Customer_ID])</code>
11	 High Value Customers	Customers with total sales greater than average	High Value Customers = <code>COUNTROWS(FILTER(VALUES('Sales_Dataset'[Customer_ID]), CALCULATE(SUM('Sales_Dataset'[Total Sales])) > AVERAGEX(VALUES('Sales_Dataset'[Customer_ID]), CALCULATE(SUM('Sales_Dataset'[Total Sales])))))</code>
12	 Avg Unit Price	Average unit price of products	Avg Unit Price = <code>DIVIDE([Total Sales],[Total Quantity])</code>
13	 Orders Growth Label	MoM growth % in orders (With up/down arrow)	Orders Growth Label = <code>VAR Growth = [Orders Growth %] RETURN IF(Growth > 0, "▲" & FORMAT(Growth, "0.00%") & " vs Previous Month", "▼" & FORMAT(ABS(Growth), "0.00%") & " vs Previous Month"</code>
14	 Price Growth Label	MoM growth % in avg unit price (With up/down arrow)	Price Growth Label = <code>VAR Growth = [Price Growth %] RETURN IF(Growth > 0, "▲" & FORMAT(Growth, "0.00%") & " vs Previous Month", "▼" & FORMAT(ABS(Growth), "0.00%") & " vs Previous Month"</code>
15	 Quantity Growth Label	MoM growth % in quantity (With up/down arrow)	Quantity Growth Label = <code>VAR Growth = [Quantity Growth %] RETURN IF(Growth > 0, "▲" & FORMAT(Growth, "0.00%") & " vs Previous Month", "▼" & FORMAT(ABS(Growth), "0.00%") & " vs Previous Month"</code>
16	 Avg Age Growth Label	MoM growth % in avg age (With up/down arrow)	Avg Age Growth Label = <code>VAR Growth = [Avg Age Growth %] RETURN IF(Growth > 0, "▲" & FORMAT(Growth, "0.00%") & " vs Previous Month", "▼" & FORMAT(ABS(Growth), "0.00%") & " vs Previous Month"</code>
17	 Male %	Percentage of male customers	Male % = <code>DIVIDE([Male Customers],[Total Customers])</code>
18	 Female %	Percentage of female customers	Female % = <code>DIVIDE([Female Customers],[Total Customers])</code>

NOTE:

- [Total Sales] = `SUM('Sales_Dataset'[Total Sales])`
- [Total Quantity] = `SUM('Sales_Dataset'[Quantity])`
- [Orders Growth %] = `DIVIDE([Total Orders] - [Previous Month Orders], [Previous Month Orders])`
- [Price Growth %] = `DIVIDE([Avg Unit Price] - [Previous Month Avg Unit Price], [Previous Month Avg Unit Price])`
- [Quantity Growth %] = `DIVIDE([Total Quantity] - [Previous Month Quantity], [Previous Month Quantity])`
- [Avg Age Growth %] = `DIVIDE([Avg Age] - [Previous Month Avg Age], [Previous Month Avg Age])`

CUSTOMER ANALYTICS – ANALYSIS REPORT

The objective of this funnel analysis is to track how customers move through different stages of the purchase process, measure conversion rate at each stage, and identify stages where customers drop off, so the business performance can be improved.

FUNNEL ANALYSIS

Funnel Value by Stage

Key Insights:-

- ✓ The business generated **992** total orders from **947** customers, showing strong customer acquisition at the top of the funnel.
- ✓ A significant drop is observed from total customers (**947**) to **high-value customers (369)**, indicating that only a portion of customers contribute strongly to revenue.
- ✓ The biggest drop-off occurs at the repeat customer stage, where only **52** customers made repeat purchases.
- ✓ The final conversion rate is only **5.2%**, which highlights low customer retention and repeat purchase behavior.
- ✓ The funnel suggests that while the business is effective in attracting customers, it needs to improve customer engagement, loyalty, and retention strategies to increase repeat customers.

Conclusion:-

The funnel analysis shows that the business is successful in generating a high number of orders and customers at the top of the funnel, with 992 total orders and 947 total customers. A moderate number of customers, 369, fall into the high-value customer segment, which indicates that a good portion of customers contribute significantly to sales. However, the biggest drop is seen in the final stage, where only 52 customers become repeat customers, resulting in a very low final conversion rate of around 5.2%. This indicates that while customer acquisition is strong, customer retention is weak. The business is able to attract customers, but it is not converting enough of them into loyal repeat buyers. To improve performance, the company should focus on retention strategies such as personalized offers, loyalty programs, follow-up campaigns, better customer engagement, and improved post-purchase experience.

Key Findings :-

Strong customer acquisition with **947** customers and **992** orders

Only 369 customers fall into **high value** segment

Repeat customers are very low **at just 52**

Retention and loyalty needs **major improvement**

KEY TAKEAWAY

The business performs well in acquiring customers and generating orders, but struggles significantly with retention and repeat purchases. Improving customer engagement, loyalty programs, and personalized communication can help increase repeat customers and overall revenue.

CUSTOMER ANALYTICS – SEGMENTATION ANALYSIS

The objective of customer segmentation analysis is to group customers based on their purchasing behavior, product category preference, and spending patterns in order to understand which customer segments contribute the most to sales and engagement. This helps the business identify high-performing customer groups and design targeted marketing, retention, and product strategies for each segment.

Customer Overview

Total Customers by Category

Avg Order Value by Category

Total Sales by Gender

Key Insights:-

- **Electronics** is the strongest customer segment with 344 customers, making it the most popular category among all segments.
- **Education** is the second-largest segment with 178 customers, followed by **Fashion** (156), **Furniture** (155), and **Grocery** (151).
- The **average order value** is **highest in Electronics**, which shows that customers in this segment not only buy more but also spend more per order.
- **Grocery** has one of the **lowest** average order values, indicating lower spending per purchase compared to other categories.
- **Male customers** contribute slightly **higher total sales (around 73M)** compared to **female customers (around 67M)**, showing a small gender-based difference in sales contribution.
- Overall, **customer behavior differs by category**, which suggests that each segment has unique purchasing patterns and revenue potential.

Conclusion:-

- ❑ The customer segmentation analysis shows that **Electronics is the most valuable customer segment** in terms of both customer count and average order value, making it the **key driver of revenue**. Education, Fashion, Furniture, and Grocery contribute a moderate share of customers, but their spending levels vary across categories.
- ❑ The gender-based sales comparison also shows that **male customers generate slightly higher sales** than female customers.
- ❑ Overall, the analysis indicates that customer segments behave differently in terms of category preference and spending patterns. Therefore, businesses should use **segment-specific strategies**, such as premium promotions for high-value categories like Electronics and targeted offers for lower-spending categories like Grocery, to improve customer engagement, sales performance, and retention.

KEY TAKEAWAY

Electronics leads in both customer count and spending, making it the top-performing segment. Businesses should focus on enhancing customer experience in this category while using targeted strategies for other segments to drive balanced growth and higher engagement.
